

## **NOTE – UPDATED AS OF MARCH 31, 2010**

### **ESTIMATES OF TOTAL QUALIFYING CATCH (I.E., DENOMINATORS) FOR CALCULATING ALLOCATIONS**

**NOTICE: Your actual allocation will differ from any allocation that you estimate using these data. Qualified catch can vary with several factors including individual eligibility and associated qualified catch. Since the program is “licensed-based”, qualifying harvests require accurate assignments of vessel histories to specific licenses. Because of the uncertainty of these assignments prior to implementation of the program, we cannot determine with certainty qualified catch histories (or denominators). Any adjustments of landings assigned to any qualified license will result in changes in qualified catch (and denominators). In addition, if the Council selects options that allocate harvest shares to processors, qualify catch from vessels fishing with interim licenses or participants in the entry level pilot program fishery your allocation will be affected. Note that under the current motion any allocation to processors would come from the catcher vessel sector allocation. Using a variety of estimates will improve your understanding of your catch history under the different qualifying year options. For this purpose, we also include total catch history by sector by year in a third table below.**

#### **Estimating your allocation**

The allocations are based on your license’s share of the qualified harvests, after each eligible license has dropped its lowest qualifying catches. As a result, the computation of allocations requires a few steps.

#### **Step 1: License eligibility (including selection of a qualifying year option)**

To be eligible under a specific qualifying year option, a license must have been used on a vessel to make a directed landing of rockfish during at least one of those qualifying years.

#### **Step 2: Choose a primary rockfish species and qualifying year option**

Identify the primary species under the qualifying year option. This will tell you which denominator and years of catch history for your license you will need for determining your allocation of that species. Denominators appear in Table 1 below.

#### **Step 3: Identify your annual catch history**

Qualified history is only retained catch (excluding catch used for fish meal) from the Central Gulf. Only in-season catch history associated with a qualified LLP license counts toward the history associated with that license. Table 2 defines qualified catch for each species by harvest date and landing date for each year.

#### **Step 4: Identify “drop” years**

Identify specific years of your catch history to “drop”. The years of lowest total in-season catch of the species (including years you did not fish) should be dropped. All years count (including years you did not fish). The remaining catch after dropping lowest years is your qualified catch. Note: you may drop different years for the different species.

#### **Step 5: Sum your qualified catch**

Sum qualified catch for all years remaining after removing catch from the dropped years.

#### **Step 6: Determine your percentage of the total qualified catch across sectors**

Divide your qualified catch by the total qualified catch of both sectors combined for the qualifying years and species shown in Table 1. This is your percentage of the total qualified catch for the identified qualifying

period. It provides an estimate of the portion of your allocation of this species, assuming that the Council chooses to apply this qualifying year option to both sectors.

Step 7: Determine your percentage of the total qualified catch in your sector

Divide your qualified catch by the total qualified catch of your sector for the qualifying years and species shown in Table 1. This is your percentage of your sector's qualified catch. It provides an estimate of the portion of your sector's allocation of this species that you will receive under the chosen qualifying year option.

Additional table

Table 3 shows total catch by sector for each qualifying year. This table includes both catch by vessels that are not believed to qualify for the program and catch that would be excluded by licenses under the drop year provisions. This table should provide some information concerning your catch relative to others in your sector and the fishery, as a whole.

**Table 1. Qualifying year denominators.**

Qualify years	Species	Sector		Total
		Catcher processor	Catcher vessel	
1996 - 2002 (drop 2)	Northern rockfish	6,040.1	9,770.9	15,811.1
	Pacific ocean perch	19,685.8	19,544.1	39,229.9
	Pelagic shelf rockfish	8,387.0	6,941.1	15,328.2
1998 - 2006 (drop 2)	Northern rockfish	10,192.9	16,262.9	26,455.8
	Pacific ocean perch	25,357.9	33,113.3	58,471.2
	Pelagic shelf rockfish	8,774.3	10,953.1	19,727.4
1998 - 2006 (drop 4)	Northern rockfish	9,289.5	14,335.0	23,624.6
	Pacific ocean perch	20,562.6	28,338.5	48,901.1
	Pelagic shelf rockfish	7,688.3	9,636.6	17,324.8
2000 - 2006 (drop 2)	Northern rockfish	8,369.4	12,387.0	20,756.5
	Pacific ocean perch	18,145.5	26,636.5	44,782.0
	Pelagic shelf rockfish	5,369.9	8,690.7	14,060.7
